Validate

Render

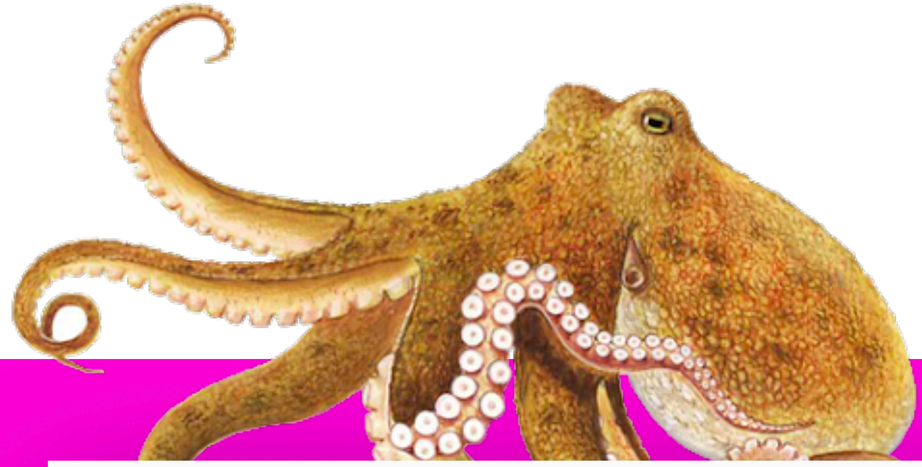
Well render usage is pretty self explanatory,
It renders the component.

Screen

Screen, gives us a set of utilities to
Checkout if the component
was rendered in the expected way



```
import { render, screen } from "@testing-library/react";
import App from "../App";

test('Render a component', ()=>{
    render(<App/>)
    const counter = screen.getByText(/counter/i);
     expect(counter).toHaveTextContent("Counter: 0");
})
```
