SEAL OF APPROVAL

SEAL OF APPROVAL

Let's put it on gifs, then code

Render

Screen.getBy...

Validate

Trigger some events

Validate

Render

Well render usage is pretty self explanatory,
It renders the component.

Screen

Screen, gives us a set of utilities to
Checkout if the component
was rendered in the expected way

```
import { render, screen } from "@testing-library/react";
import App from "../App";

test('Render a component', ()=>{
  render(<App/>)
  const counter = screen.getByText(/counter/i);
  expect(counter).toHaveTextContent("Counter: 0");
})
```
